- Integrated with leading DRM services
- Batch delivery for multiple formats/destinations
- Documented APIs
- Throughput and performance reports
- Monitoring and reporting

Quality

Let your audience decide how and when they want to view your content - M2A Live Capture delivers across multiple devices and platforms.

Captures are frame accurately trimmed and can be triggered directly from playout using SCTE markers.

Multi-hour programmes are available as VOD within minutes of transmission end.

Accuracy

Integration with your existing workflows is easy using our simple yet comprehensive RESTful API and web console interface.

Live programmes can be edited manually via the Capture tool of the M2A Console. The Capture tool uses all the main functionalities of a non-linear editing tool, aiding accurate and efficient editing within a live context, enabling Operators to remove ad breaks from live TX'd content.

Ads, stings and any other static content can be combined with the captured content to create the finished asset.

Expertise

With over 40 years combined experience working for tier one broadcasters, M2A has collectively been responsible for some of the most innovative and highly respected advances in video technology.

M2A Live Capture is trusted by global broadcasters and OTT platforms, including DAZN, BBC Studios, ITV, Channel 4 and Sony Crackle.

The M2A MCR operates 24/7 out of our London-based headquarters managed by our team of skilled media operators who work hand in glove with our team of Developers ensuring all captures are delivered to platform.
